

## Digital Filters and Signal Processing in Electronic Engineering: Theory, Applications, Architecture, Code (Hardback)

Filesize: 4.29 MB

### **Reviews**

*These kinds of publication is the ideal pdf offered. It generally is not going to expense too much. I am just delighted to let you know that this is actually the very best book i have go through inside my very own life and might be he finest ebook for ever.*

**(Mabelle Schoen)**

## DIGITAL FILTERS AND SIGNAL PROCESSING IN ELECTRONIC ENGINEERING: THEORY, APPLICATIONS, ARCHITECTURE, CODE (HARDBACK)

DOWNLOAD

ELSEVIER SCIENCE TECHNOLOGY, United Kingdom, 1999. Hardback. Book Condition: New. 240 x 174 mm. Language: English . Brand New Book. From industrial and teaching experience the authors provide a blend of theory and practice of digital signal processing (DSP) for advanced undergraduate and post-graduate engineers reading electronics. This fast-moving, developing area is driven by the information technology revolution. It is a source book in research and development for embedded system design engineers, designers in real-time computing, and applied mathematicians who apply DSP techniques in telecommunications, aerospace (control systems), satellite communications, instrumentation, and medical technology (ultrasound and magnetic resonance imaging). The book is particularly useful at the hardware end of DSP, with its emphasis on practical DSP devices and the integration of basic processes with appropriate software. It is unique to find in one volume the implementation of the equations as algorithms, not only in MATLAB but right up to a working DSP-based scheme. Other relevant architectural features include number representations, multiply-accumulate, special addressing modes, zero overhead iteration schemes. and single and multiple microprocessors which will allow the readers to compare and understand both current processors and future DSP developments. Fundamental signal processing procedures are introduced and developed: also convolution, correlation, the Discrete Fourier Transform and its fast computation algorithms. Then follow finite impulse response (FIR) filters, infinite impulse response (IIR) filters, multirate filters, adaptive filters, and topics from communication and control. Design examples are given in all of these cases, taken through an algorithm testing stage using MATLAB. The design of the latter, using C language models, is explained together with the experimental results of real time integer implementations. Academic prerequisites are first and second year university mathematics, an introductory knowledge of circuit theory and microprocessors. and C Language. \* Provides an unusual blend of theory and practice of digital...
